                                                  The present invention relates to a polypeptide comprising an antiangiogenesis polypeptide region linked to a therapeutic protein or CC polypeptide region, or a diagnostic protein or polypeptide region. The CC polypeptide comprising an antiangiogenesis polypeptide region or the CC nucleic acid encoding the polypeptide comprising the antiangiogenesis of polypeptide is useful for diagnosing or treating angiogenesis-dependent CC diseases or cancer. Angiogenesis-dependent diseases include age-related CC macular degeneration, artherosclerosis, angiofibroma, neovascular CC glaucoma, arteriovanous malformations, nonunion fractures, arthritis, CC rheumatoid arthritis, lupus, connective tissue disorders, Osler-Weber CC syndrome, psoriasis, corneal graft neovascularisation, pyogenic CC granuloma, delayed wound healing, retrolental fibroplasia, diabetic CC granuloma, televoderma, granulations, haemangioma, trachoma, cCC haemophilic joints, vascular adhesions, hypertrophic scars, multiple sclerosis, restenosis or obesity. The present sequence is a coding ccc sequence shown in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polypeptide comprising an antiangiogenesis polypeptide region linked to a therapeutic protein or a diagnostic protein, useful for diagnosing or treating angiogenesis-dependent diseases e.g. cancer, lupus or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Tcf; promoter construct;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  treatment
                             6
```

This invention relates to a novel viral vector comprising a betaCC catenin/bipartite T-cell factor (Tcf) responsive promoter construct which
CC contains a first promoter region having a copy of Tcf/LEF-1 binding site
CC contains a first promoter region having a copy of Tcf/LEF-1 binding site
CC contains a first promoter region and a nucleic acid
CC sequence, where the first and second promoter regions are operatively
CC linked to target nucleic acid sequence. The invention may be useful for
CC the development of compounds with a cytostatic activity, through action
CC may be useful for treating an individual with colon cancer which is
CC metastasised to the liver. The treatment involves administering the
CC vector of the invention where the nucleic acid sequence encodes a
CC therapeutic polypeptide or thymidine kinase, a prodrug and chemotherapy,
CC radiation, surgery or gene therapy to the individual. The present
CC sequence is that of a therapeutic gene which may be used in the vector of
CC the invention for the treatment of an individual with cancer.

Claim 80; SEQ ID NO 335; 1762pp; English

The present invention relates to diagnosing or monitoring transplant rejection, e.g. cardiac or kidney transplant rejection, in an individual comprises detecting the expression level of one or more genes. The methods, system and kits are useful in diagnosing or monitoring transplant rejection, e.g. heart, kidney, liver, pancreas, pancreatic islet, lung, bone marrow or stem cell transplant rejection, in an individual. The method is also useful in assessing the immune status of an individual. The methods are also useful in diagnosing and monitoring diseases that involve the immune system, e.g. rheumatoid arthritis, lung, inflammatory bowel diseases, multiple sclerosis, HIV/AIDS or viral, bacterial or fungal infection. The present sequence represents a many areference sequence for a 50 mer oligonucleotide marker for diagnosis and monitoring of allograft rejection and other disorders.

/note="Vector: pDrive Cloning Vector; RT-PCR was performed using gene-specific primers flanking the open-reading frame. PCR products were subcloned into pDrive Cloning Vector and sequenced completely using M13 forward and reverse primers. Sequencing gaps were closed by re-sequencig using primers flanking the gapped areas."

/notes "Vector: pDrive Cloning Vector; RT-PCR was performed using gene-specific primers flanking the open-reading frame. PCR products were subcloned into pDrive Cloning Vector and sequenced completely using M13 forward and reverse primers. Sequencing gaps were closed by re-sequencing using primers flanking the gapped areas."

First strand cDNA synthesis was primed with a a 50 bp linker primer containing an oligo dT sequence preceded by a synthetic XhoI site. 5 prime adaptors were used containing an EcoRi cohesive end. The finished cDNAs were inserted in to the ZAP express vector unidirectionally in the sense orientation with respect to the lacZ promoter of pBK-CMV. An amplified library was prepared from approximately 3 million primary clones in the lambda ZAP Express vector. In vivo excision was then the lambda ZAP Express vector. In vivo excision was then
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 used to generate individual pBK-CMV phagemid clones for {\tt EST} sequencing."

//note="Organ: ovary; Vector: pDONR 201; Site 1: Not1;
Site 2: Not1; RNA obtained from female overies animals at 8 km cold. Tissues were snap-frozen and kept at -80C for two days before RNA extraction and purification (Tri-reagent method). cDNA was primed using oligo-dT primer: 5'-pgACTAGTTCTAGATCGCGAGCGGCCC(T)25-3' and cloned into the EcoRV/NotI sites of pExpress-1.
Size-selection >1.25kb resulted in an average insert size of 1.7kb. This primary library is not normalized (normalized library is NIH MGC 252) and was constructed by Express Genomics (Frederick, MD). Note: this is a NIH_MGC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         quality sequence stop:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
